

Early Detection of Mild Traumatic Brain Injury in the Medical
Setting:
Presentation to Medical Staff
With
Laura Lenkey, Ph.D. CCC-SLP

Friday, March 6, 2009, 10:15-11:45

Speaker:

Laura E. Lenkey, Ph.D.
Assistant Professor, University of Toledo, Toledo OH
Private Practice: the Speech & Swallow Center, Petoskey, MI
Ph.D. Florida State University, College of Human Sciences 2000

Seminar Description:

This presentation focuses on key points introducing medical staff to the importance of early diagnosis and intervention of mild traumatic brain injury. An overview and application of the ACE (Acute Concussion Evaluation, developed by the Center for Disease Control) will be presented along with current evidence supporting early diagnosis and intervention.

Learner Objectives:

- 1.) Participants will be able to describe the causes, effects of, criteria for diagnosis and referral to speech language pathology for mild traumatic brain injury utilizing an In-service Training Module.
- 2.) Participants will be able to select from an In-Service Training Module, pertinent information for discussing diagnosis and intervention of mild traumatic brain injury for specific audiences.
- 3.) Participants will be able to develop pre and post testing measures to determine efficiency of In-Service Training Module
